SUMMARY

I'm Abhilash, a full-stack developer with strong experience in React Native and React JS. I developed my skills in mobile app development through internships and full-time roles, specializing in building smooth and reliable native apps using React technologies. I am passionate about coding, problem-solving, and improving my skills through personal projects

EXPERIENCE

React Developer | 04 / 2024 - Currrent

Thoughline Technologies Pvt Ltd

- Primarly worked on ReactJS with typescript Including mulltiple POC and Client Projects

Assistant Graphic Designer | 02 / 2020 - 03 / 2020

Migobucks Pvt Lts

- Worked as an part-timer durring college
- Worked on Flutter and Adobe XD.

SKILLS

- React Native
- React JS
- Node JS
- Java
- Flutter
- JavaScript
- Next JS
- Redux
- Sass
- Tail-Wind
- Express JS
- ASP.Net
- SQL
- Angular
- Git

LANGUAGE

- English
- Malayalam
- Tamil
- Hindi

EDUCATION

Bachelor's degree In Computer Science

Nilgiri college of Art & Science, Tamil-nadu | 08 / 2019 - 05 / 2022

- Developed Student management Application In Flutter for internal use.
- Got familiar with fundamentals

PROJECTS

Picky Assist Application

- Published to Google Playstore and Apple store.
- Packed with Native features like notification, background service, overlays, telecom service, worked on intent and handling intents, worked with SIM operations and SIM tracking.
- Developed in React-native with mongoDB and php as its backend.

Thoughtline Client Projects.

- Thoughtline accepts contracts from some large-scale companies and uses its employees as contractors. One of these main companies is a vehicle rental company with multiple large-scale projects in multiple tech stacks. I mostly worked with this particular client.
- **FeetView**: Worked in ReactJS, ASP.Net, and SQL, a large-scale application with multiple modules. I worked on rewriting this application from OutSystems to ReactJS, Kendoreact, Redux, and backend in ASP.Net.
- I worked on frontend as well as backend through out the project.
- **Twinlake stock-management**: Worked fully on designing UI, Frontend, and Backend. This was a stand-alone Application for inventory management, and deep graphical analysis of such stockes.
- **DriverView**: Worked on ReactJS for the website, and worked on ReactNative for the Mobile app version of the same module.
- **Telematics**: Worked on Analysis and development of multiple cron-jobs of an large scale module in .Net and SQL.
- **Registration Renewal System**: Worked on .Net and SQL by Analysing and developing a Large smale cron-job module.
- **Repair Milestone**: Worked on .Net and SQL by Analysing and developing a cron-job module. This project was developed in a new architecture (Clean Architecture, which was different from what we were using so far, throughout the other projects). For that reason i had work closely with some top-level developers.

Student Management Application

- Developed durring college for internal use.
- This was my first app, can handle multiple users, crud operations of student data.
- Developed in Flutter and MongoDB.
